

Note: these do not generally apply to topical preparations.

ACE inhibitors, other analgesics (NB: avoid use of other NSAIDs including aspirin.), anticoagulants; antidiabetics; antiepileptics; diuretics (water tablets); steroids: increased risk of gastrointestinal ulceration/bleeding; muscle relaxants; vasodilators.

This is not an exhaustive list: further information should be checked using the relevant information sources for any proposed medication to be taken in conjunction with the NSAID.
